

# Farhan Ahmed

Junior Software Developer

## Profile

A highly motivated junior software developer with knowledge of HTML & CSS, JavaScript, React, Bootstrap & Material UI, and version control system GIT. Also, have knowledge of working in the Agile framework. I am enthusiastic about learning new skills and seeking to work as a front-end developer for an organization that allows me to grow professionally.

### CURRENT SITUATION

Currently part of the training program **"Coding and Finnish language"** organized by TE-toimisto and BearIT. It's an 8-month training program I started on 21 April 2022 to learn and improve my programming skills and the Finnish language.

### CURRENT PROJECT

Working on the development of an app to assist football coaches in better management of data and decision-making. The role in the project is of a front-end developer. The technology being used is React, Material UI, GIT & BitBucket. Figma is being used for the design prototype.

### ROLE IN PROJECT

Individually working on building home page view, tables to show individual player statistics, team season statistics, and overall player statistics for one game. Ability to fetch data from the database by making API calls with useEffect hook, overall layout, and design of the tables, adding functionality such as sorting to table. Different features used are Props and hooks such as useState, and useEffect alongside it taking care of design aspects and customizing material UI elements.
